No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

It is derived from lymphoid B cells, cell line Raji, clone no. 13. Its position in the genome is chromosome/segment 3. It was published by Freeman, F.J. et al., J. of Immunology, 143: 8: 2714-2722, 15th October 1989. It can be found in Genbank at Accession no. M27533. The encoded protein, R67989, binds both human CTLA4 and human CD28. It is related to human hB7-2 (see Q81351) and murine hB7 (see Q81372).

Peptide
                                                                                                                                                                                                         which allows the induction of an anti-tumour response by T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Domain
                                                                                The modified tumour cells can be used for inducing an anti-tumour T-lymphocyte response in a subject and are effective against both modified and unmodified tumour cells. The modified tumour cells can also be administered to prevent or inhibit metastatic spread of a tumour or to prevent or inhibit recurrence of a tumour following therapeutic
                                                                                                                                    This sequence represents the amino acid sequence of a human B7 protein. The coding sequence can be used to transfect mammalian tumour (sarcoma) cell so that the B7 protein is expressed by the tumour cell and has the ability to co-stimulate T cells and bind CD28 or CTLA4 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modified-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modified-site

                                                                                              This sequence is the human B7-2 antigen, which can be used in the method of the invention. The method is for transfecting an isolated mammalian tumour cell with an exogenous nucleic acid molecule encoding a mammalian B7-2 molecule, where the B7-2 molecule is expressed in the tumour cell is capable of costimulating a T cell and is capable of binding a CD28 or CTLA4 ligand. The method is useful for treating tumours
                                                                                                                                                                                                                     Tumour cell transfected to express B7-2 molecule therapy by stimulating T-cell response
                                                                                                                                                                                                                                                               WPI; 1999-130394/11.

CC The invention relates to an isolated nucleic acid molecule encoding a CC fusion protein comprising a first nucleotide sequence encoding a first CC peptide, and a second nucleotide sequence encoding a second peptide. CC The first nucleotide sequence hybridizes in 6 % sodium chloride/sodium CC citrate (SSC) at 45 deg. C, followed by a wash in 0.2 x SSC at 50 deg. C CC to a portion of a nucleotide sequence which encodes a human or murine CC to a portion of a nucleotide sequence which encodes a human or murine CC the ability to bind CD28 or CTLA4. The first peptide has an amino acid CC sequence that is identical or at least 50% identical with the CC extracellular domain of a human B7-2 peptide (AAB37085). The second CC peptide is especially an immunoglobulin constant region. This sequence CC comparison with the B7-2 sequence. The human B7-2 protein is an example CC are useful in various expression vectors to direct synthesis of the CC corresponding proteins or peptides in variety of hosts, particularly CC evharyotic cells, e.g. mammalian or insect cell culture. The nucleic acids are also useful for enhancing the immunogenicity of a mammalian CC cell, e.g. tumour cell (sarcoma) or an antigen presenting cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ρ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (macrophage). The fusion proteins or peptides are useful for enhancing or suppressing T cell-mediated immune responses, e.g. in situations of tissue, skin or organ transplantation, or in graft-versus-host disease. The proteins are also useful for enhancing the efficacy of vaccination against a variety of pathogens, and may also be used to upregulate an immune response against a particular pathogen during an infection or against a tumour in a tumour-bearing host.

The cDNA encoding this sequence was isolated from a Burkitt lymphoma cell line cDNA library. Selection of cDNA clones was based on expression of B7, as detected by the anti-B7 monoclonal antibody. The human B7 cDNA was used in hybridisation analysis to isolate the murine B7 cDNA (see AAA61329). The B7 nucleic acid sequences may be used to generate transgenic, knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The expressed B7 protein is useful for enhancing or blocking activated T cell mediated immune responses and immune fuseases (e.g. rheumatoid arthritis or multiple sclerosis), herpes simplex, influenza, the common cold and HIV. It is also useful in tissue and organ transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human B7.1 co-stimulatory molecule; antigen presenting cell; immune response; cell surface receptor; Major histocompatibility complex; MHC classII; proton motor force; mitochondrial membrane potential; mitochondrial metabolism; cancer; autoimmune disease; glycoprotein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is human B7.1 co-stimulatory molecule. This is a glycoprotein on the surface of antigen presenting cells. This is involved in stimulation of an immune response by its ability to interact with various immune cell surface receptors. The regulation of cell surface expression of MIC classII and co-stimulatory molecule B7 can be manipulated by regulating the intracellular dissipation of proton motor force which can be assessed in terms of mitochondrial membrane potential.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human B7.1 co-stimulatory molecule
                                                                                                                                                                                                                                                                                                                                                                                                     These methods can be used for regulating cell growth and division to control disease processes by manipulating mitochondrial metabolism and the expression of cell surface immune proteins. They can be used for treating diseases associated with excessive cellular division, aberrant differentiation, and premature cellular death, e.g. cancers, autoimmune diseases, neurodegenerative disorders etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-OCT-1999

The invention relates to an isolated nucleic acid construct (I)

comprising a region encoding an interleukin-12 (II-12) fusion protein

(comprising an II-12 p35 subunit, an III-12 p40 subunit and a linker

(comprising an II-12 p35 subunit, an III-12 p40 subunit and a linker

comprising the subunits) and a region encoding a B7 protein. (I)

may be used to produce II-12 fusion proteins according to standard

crecombinant DNA methodologies. The fusion proteins may be produced either

compression in a fermentation culture or in vivo as part of a gene therapy

compression in this case (I) is used to transform a patients cells, which

compression in the functional polypeptide to supplement the patients own.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         such as leukaemia. Alternatively, the polypeptides may be used as antigens in the production of antibodies to IL-12 and to assay for agonists and antagonists of its activity. The antibodies and antagonists may be used to inhibit the activity of IL-12. (I) may also be used diagnostically as a probe which hybridizes to sequences encoding IL-12
                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                  and the antibodies may be used to detect the presence of IL-12 oplypeptides in samples. They may be used diagnostically to quantitate the expression of the polypeptide by patients and hence which subjects

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAU05121
                                       composition comprises an allogeneic tumour cell selected from $M620 cell, COIC 205 cell and $M403 cell, and a physiological carrier. The allogeneic cell stimulates an immune response to an autologous tumour cell in the patient. The composition is useful for stimulating an immune response in a patient having an adenocarcinoma. e.g. colon, breast, lung or prostate source of antigen that can be administered to a variety of patients, in contrast to using autologous tumour cells, which must be isolated from each individual patient. The allogeneic cells are suitable as a cancer vaccine and can stimulate an immune response against autologous tumour cells of a cancer patient. The present sequence represents the amino acid sequence of colorectal tumour antigen CD80 used in the method of the
                                                                                                                                                                                                                                                                                                                                                                  New composition comprising an allogeneic tumour cell, useful for
stimulating an immune response in a patient having an adenocarcinoma,
especially useful for treating colorectal, breast, lung or prostate
                                                                                                                                                                                                                                                                           The invention relates to a composition for stimulating an immune response
                                                                                                                                                                                                                                                                                                                     Example 2; Page 130-131; 131pp; English.

                                                                                                                                                                                                                                                                                                                                                                           δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC molecule, by using an agent which induces or increases expression
CC of the T cell costimulatory molecule on the tumour cell surface, or
CC by coupling the T cell costimulatory molecule to the tumour cell
CC surface. Tumour cells further modified to express major
CC or in which expression of an MFC associated protein, the invariant
CC cor in which expression of an MFC associated protein, the invariant
CC chain, is inhibited are also disclosed. The modified tumour cells
CC are used to treat a patient with a tumour, preventing or inhibiting
CC metastatic spread or tumour recurrence. The tumour may be a
CC metastatic spread or tumour recurrence. The tumour may be a
CC metastatic spread or tumour by modification of tumour, and a
CC method for treating a tumour by modification of tumour cells in vivo
CC are also disclosed. The treatment methods increase the immune period to the tumour cell in vivo. The antitumour T cell mediated immune
CC unmodified tumour cells from which the modified tumour cells and the
CC modified tumour cells is not dependent upon expression of a
CC costimulatory molecule on the tumour cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence is the human B7.1-murine A5B7 F(ab')2 fusion protein (AB7), and is an example of the antibody of the invention. The antibody is an anti-CEA (carcinoembryonic antipen) antibody (preferably 806.077 Ab). Host cells or transgenic organisms transformed with DNA encoding the antibody, are used to make the antibody or conjugate. The conjugate is used in a medicament suitable for intravenous administration. The conjugate can be used for cancer therapy, selectively killing tumour cells. The antibody can be used for in vivo or in vitro

                                                                                                                                                                                                                                                                                                              This 29 kDa soluble fusion protein, termed hB7.1glu-glu, is composed of human co-stimulatory molecule B7.1 extracellular domain fused C-terminally to a synthetic Glu-glu epitope (see AAW90197). It was produced from total RNA of Epstein-Barr virus-transformed human spleen cells by RT-PCR using primers MR67 and MR145 (see AAX01601). The fusion protein has been produced in Sf9 Spodoptera CAX016010 insect cells using a baculovirus expression system. The invention relates to molecules such as diabodies, trivalent and tetravalent antibodies and small antigen binding peptides which can cross-link, or cross-react with, B7.1 and B7.2 expressed on cross-link or cross-react with, B7.1 and B7.2 expressed on antigen-specific T cell activation. Methods to produce such antigen-specific T cell activation are used to treat or prevent cliseases of the immune system, in particular graft rejection, graft versus host disease, allergy and autoimmune diseases (claimed).
                                                                                                                                                                                                      Matches

This is the amino acid sequence of B7-1.574.1, a fusion protein comprising the extracellular domain (amino acids 1-215) of human co-stimulatory molecule B7-1 joined via a flexible peptide linker to an scFv (see AAW86002) derived from murine 574 monoclonal antibody. B7-1.574.1 cDNA (see AAW80292) can be inserted into vector pCI to allow expression of the fusion protein in mammalian cells. The trophoblast cell surface antigen defined by 574 is expressed at high levels on the cells of a wide variety of human tumours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI cand/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) into a haematopoietic cell lineage. B7-1 is expected to bind specifically to CD28 and CTLA-4 present on human T-cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δõ
                              The specification describes the use of a single chain antibody (ScFv), CC which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a CC disease condition. The ScFv antibody is useful in the manufacture of CC a medicament, for affecting a disease in vivo, for preparing a CC pharmaceutical composition, for in vivo imaging and/or for adjuvant CC treatment of a disease. The ScFv antibody is also useful for CC treating inflammatory diseases including arthritis, hypersensitivity, CC autoimmune diseases, cancers, central nervous system disorders CC including Parkinson's disease, periodontal diseases, cardiopulmonary CC diseases, cardiovascular diseases, gastrointestinal disorders, CC infections, diabetes, Helicobacter related diseases, and other immune CC disorders. The present sequence represents a B7-1.5T4.1 fusion protein. This comprises the N-terminus of the ST4 ScFv is fused after amino acid CC 215 of human B7-1.
                                                                                                                                                                                                                                                                                                                                        Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Perfect score:
       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          APPLICANT: June, Carl H., Thompson, Craig B., Nabel, Gary J.
APPLICANT: Gray, Gary S., Rennert, Paul D.
TITLE OF INVENTION: Methods For Selectively Stimulating Proliferation Of T-Cells
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TELECOMMUNICATION INFORMATION: TELEPHONE: (617) 227-7400 TELEFAX: (617) 742-4214
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FILING DATE: 23 NOV 1988
ATTORNEY/AGENT INFORMATION:
NAME: Mandragouras, Amy E.
REGISTRATION NUMBER: 36,207
REFERENCE/DOCKET NUMBER: RPI-002CP2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MOLECULE TYPE: protein
DESCRIPTION: B cell activation antigen; natural ligand
DESCRIPTION: for CD28 T cell surface antigen; transmembrane protein
                                                                                                                                   FEATURE:
                                                                                                                                                                                                                                                                                                                                     FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FEATURE:
